

Project Proposal

My term poster idea is to look at the top 250 and lower 250 counties in total income by county. The data will be pulled from the 2010 census data and the ESRI data. I will look at these variables with a choropleth map that use a gradient to show the top 250 counties and then the lowest 250 counties, and then two-four sub maps showing each of these separately.
